

dHome is the leading manufacturer of dome structures in the world. Our domes are built to exacting standards using the highest quality materials. We've been building domes for over 35 years and have a proven track record of providing quality homes at reasonable prices.

A dome house provides you with a totally new living experience in a spacious and open environment. Imagine a curved ceiling more than 20 feet high with skylights bringing the beauty of the outdoors into your home.

Domes are stronger and safer than conventional homes, and their design provides more stability against hurricanes, tornados, and earthquakes. Dome houses are also more energy efficient. A dome home has approximately 30 to 50% less roof and wall area exposed to the elements than conventional homes, resulting in reduced energy costs. The spherical space also provides for a natural air flow, minimizing cold spots and increasing interior comfort.

Building Models

Model	Total Sq. Ft.	Sphere Size	Price
Class IA	4700 square ft.	50 ft. 5/8 sphere	\$150,000
Class IB	4100 square ft.	35 ft. 5/8 sphere	\$125,000
